Web Mining

Lab 4

Problem1 - Collect any 10 documents (English text documents) from the web and create inverted index by doing necessary preprocessing steps using python.

```python
from urllib.request import urlopen
from bs4 import BeautifulSoup
import datetime
import random
import re
import nltk
import string
```

```python
def crawl(url,array):
    html = urlopen(url)
    bsObj = BeautifulSoup (html)
    tag = bsObj.find("p")
    text = tag.text
    filtered_text = preprocessing(text)
    array.append(filtered_text)
```

```python
from nltk import word_tokenize
from nltk.corpus import stopwords
def preprocessing(text):
    text = text.lower()
    text_p = "".join([char for char in text if char not in '!"#$%&\'()*+,-./:;<=>?@[\\]^_`{}|~|-'’—'])
#     print(text_p)
    words = word_tokenize(text_p)
#     print(words)
    stop_words = stopwords.words('english')
    filtered_words = [word for word in words if word not in stop_words]
    return filtered_words
```

```python
def invertedindex(array):
    finalarray = []
    for i in range(len(array)):
        newarray = []
        for strs in array[i]:
            for words in strs.split():
                newarray.append(words)
        finalarray.append(newarray)
```

```
    docmap = {}
    for i in range(len(finalarray)):
        for j in finalarray[i]:
            if(j not in docmap.keys()):
                docmap[j] = [i+1]
            else:
                docmap[j].append(i+1)
    docfreq = {}
    finaldocmap = {}
    for i in docmap.keys():
        docfreq[i] = len(docmap[i])
        finaldocmap[i] = [*set(docmap[i])]
    print('(Word,Frequency) ----------> (Postings List)')
    for i in finaldocmap.keys():
        print('(' + i + ',' + str(docfreq[i]) + ') ' + '-'*(22-
len(i)) + '> ' + str(finaldocmap[i]))
```

```
array = []
crawl("http://textfiles.com/stories/bgb.txt",array)
crawl("http://textfiles.com/stories/7oldsamr.txt",array)
crawl("http://textfiles.com/stories/3wishes.txt",array)
crawl("http://textfiles.com/stories/foxngrap.txt",array)
crawl("http://textfiles.com/stories/aircon.txt",array)
crawl("http://textfiles.com/stories/monkking.txt",array)
crawl("http://textfiles.com/stories/alissadl.txt",array)
crawl("http://textfiles.com/stories/aminegg.txt",array)
crawl("http://textfiles.com/stories/antcrick.txt",array)
crawl("http://textfiles.com/stories/wolflamb.txt",array)
invertedindex(array)
```

Output:

Challenging Exercise-1:

Collect any 10 documents (Indian Language text Documents in Unicode) from the web and create inverted index by doing necessary preprocessing steps using python.

```python
def file_extract(fname,array):
    file = open(fname, encoding='utf8')
    read = file.read()
    filtered_text = hindi_preprocessing(read)
    array.append(filtered_text)
```

```python
def hindi_preprocessing(text):
    stop=open('hindistopwords.txt',encoding="utf8")
    hin_stopwords = stop.read().split()
    stop.close()
    text = text.lower()
    text_p = "".join([char for char in text if char not in '!"#$%&\'()*+,-
./:;<=>?@[\\]^_`{}|~|-'' '])
#       print(text_p)
    words = word_tokenize(text_p)
#       print(words)
    filtered_words = [word for word in words if word not in hin_stopwords]
    return filtered_words
```

```python
array = []
file_extract('hindi_doc1.txt',array)
file_extract('hindi_doc2.txt',array)
file_extract('hindi_doc3.txt',array)
file_extract('hindi_doc4.txt',array)
file_extract('hindi_doc5.txt',array)
file_extract('hindi_doc6.txt',array)
file_extract('hindi_doc7.txt',array)
file_extract('hindi_doc8.txt',array)
file_extract('hindi_doc9.txt',array)
```

```
file_extract('hindi_doc10.txt',array)
invertedindex(array)
```

Output:

```

Challenging Exercise-2:

Collect any 10 documents (Documents in different formats such as PDF, DOC, ODF) from the web and create inverted index by doing necessary preprocessing steps using python.

```python
from pdfminer.pdfinterp import PDFResourceManager, process_pdf
from pdfminer.converter import TextConverter
from pdfminer.layout import LAParams
from io import StringIO
from io import open
def crawlPDF(url,array):
    pdfFile = urlopen(url)
    rsrcmgr = PDFResourceManager()
    retstr = StringIO()
    laparams = LAParams()
    device = TextConverter(rsrcmgr, retstr, laparams=laparams)
    process_pdf(rsrcmgr, device, pdfFile)
    device.close()
    content = retstr.getvalue()
    retstr.close()
    filtered_text = preprocessing(content)
    array.append(filtered_text)
    pdfFile.close()

array=[]
```

```
crawlPDF("https://github.com/dmvaldman/library/raw/master/essays/Brand%20-
%20Pace%20Layering%20-
%20How%20Complex%20Systems%20Learn%20and%20Keep%20Learning.pdf",array)
